Experiment 7

AIM: Develop Feedback Management Module using MVC Layout, Partial View & Validation. (HTML Helpers, Validation, Layouts)

Source: Models/Feedback.cs

```
using System;
using System.ComponentModel.DataAnnotations;

namespace FeedbackManagement.Models
{
    public class Feedback
    {
        public int Id { get; set; }
        [Required, StringLength(60, MinimumLength = 2)]
        [Display(Name = "Student Name")]
        public string StudentName { get; set; }
        [Required, EmailAddress, StringLength(100)]
        public string Email { get; set; }
        [Required, StringLength(80)]
        public string Subject { get; set; }
        [Required, Range(1, 5)]
        public int? Rating { get; set; }
        [Required, StringLength(500, MinimumLength = 10)]
        public string Comments { get; set; }
        public DateTime SubmittedAt { get; set; }
    }
}
```

Source: Controllers/FeedbackController.cs

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web.Mvc;
using FeedbackManagement.Models;

namespace FeedbackManagement.Controllers
{
    public class FeedbackController : Controller
    {
        // Each browser session keeps its own feedback list.
        private List<Feedback> Entries
        {
            get
            {
                if (Session["Feedback"] == null)
                    Session["Feedback"] = new List<Feedback>();
```
